of CIOs reported that AI & machine learning are a core part of their ERP.

53%
Of businesses believe ERP is one of the priority sectors for investments.

Most critical ERP function among companies.

Technology (21%)

Inventory and distribution (67%)

Sales (33%)

Accounting (89%)

92% of CIOs feel that present ERP systems present a bottleneck often requiring further intervention to enable data sharing.

UNLOCK THE DATA IN YOUR ERP SYSTEMS AND DELIVER FASTER ROI

ERP-Max is a customizable AI tool-kit for enterprises to get actionable leading indicators such as forecasting, prediction, and propensity modeling.

Utilize all your enterprise resource data in the easiest, fastest and the most cost effective way.

Connect to ERP systems through a middleware connector and extract historic data to be used for Machine Learning to create models.

ERP-Max has the ability to connect to data either within the organizations (such as CRM or HR systems) or external data (such as news or social media). The middleware then feeds into the leading proprietary Enterprise AI flagship offering, Findability.AI, which seamlessly develops, selects and deploys models to provide highly accurate predictions and forecasting.

Findability Sciences has developed ERP- Max to provide actionable data related to supply chain, inventory, finance and human resources.
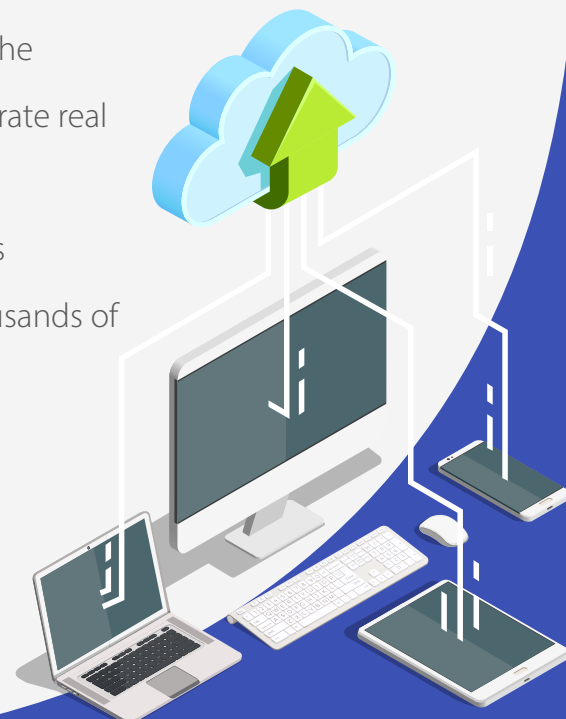

A TRIED AND TESTED SOLUTION TO EXTRACT THE MAX FROM YOUR DATA

ERP-Max is the only product that connects to data from existing systems within the company in addition to data from outside, third-party sources such as newsfeeds, social media networks, & weather forecasting platforms. This wide data produces a more comprehensive dataset for unprecedented AI/ML-based forecasts & predictions.

Findability Sciences works with various manufacturing, pharma, and retail companies worldwide in helping them make use of the ERP data in AI/ML applications. Some of the industry-leading enterprises are already using ERP-Max and reaping benefits:

- Findability Science's ERP-Max helped one of the largest used car retailers in estimating residual prices of automotive with greater accuracies
- Findability Sciences deployed ERP-Max for one of the largest electronic component manufacturers to generate real time quotes with forecasted prices
- By connecting to ERP data, Findability Sciences has provided 95%+ accuracy on sales forecasting for thousands of products to a largest air conditioner manufacturer

Founder & CEO of Findability Sciences

SUCCESS STORIES

Streamlining effective data management for a top Air-conditioning manufacturer

Findability Sciences leveraged the sales & logistics data for the world's top-ranked air conditioning manufacturer to forecast revenues & inventory with over 90% accuracy. The forecasts were created on-demand for 12 months, managing an inventory of thousands of SKU's across each distribution center. It successfully allowed the manufacturing teams to save inventory costs, plan production, & discover sales opportunities.

Tapping into the right target audience for a leading electronic components company

Findability Sciences helped one of the world's leading electronic components manufacturers to accurately forecast production quantities, required stock purchases and sales. In an uncertain market scenario, fuelled in part by global chip shortage, Findability Sciences leveraged information & external data sources about supply chain, economy, and the client to help the firm meet its targets.
